

TweeBank

Make Your Money Work For You

TweeBank is the unprecedented dual system to maintain your fiat value as you stake, while enjoying the highest growth potential of TWEE & TweeBuck (TweeB). It is the world's most exclusive Dual System to date providing the opportunity for you to invest whilst protecting your original stake.

**** Objective: Maintain the value of your fiat while enjoying the highest growth potential of TWEE and TweeB.*

TWEEBANK DUAL BENEFIT STAKING INCENTIVE

TweeBank Feature 1: STAKING

How it works? An individual can stake either TWEE, TweeB or T-Bean for a period of time, to receive a return of up to 100% interest in the format of their choice, it could be TWEE, TweeB or T-Bean.

Higher returns are rewarded to active users of the Tweebaa App.

The table below demonstrates interest percentages rewarded.

Staking Time	30 days	90 days	180 days	365 days
Annual Return Rate Tweebaa App Users	10%	16%	33%	100%
Annual Return Rate Non Tweebaa App Users	6%	9.6%	19.8%	60%

Note:

1. T-Bean is the exclusive token circulated in the Tweebaa platform. It is a (Fiat) token that can be converted to cash at any time by cashing out in TweeBank. T-Bean is the currency of the Tweebaa platform, used throughout the App to buy and sell products. Every transaction in Tweebaa is done using T-Beans. This means that there is no inconvenience of calculating exchange rates for different countries. The stable value of the T-Bean is US\$0.10 without any fluctuations, while it has high growth potential with plans to list it in the exchange as a stable crypto, like USDT, at some point in the future. The listing price will be not less than US\$0.10.

2. 60% of the staking return is based on the staking amount of TWEE, TweeB or T-Bean, 40% is based on your TiV (Tweebaa Influence Value) within the Tweebaa App platform. This is measured by your usage of the

App and contributions to the Tweebaa ecosystem. Therefore, active users of the Tweebaa App receive higher rewards as demonstrated in the table above.

3. To gain the highest level of interest rewards, it is necessary to download and use the Tweebaa App. Tweebaa is a valuable multi-purpose App where users are rewarded and earn from every activity, ie. posting, liking, commenting, voice-calling, buying, selling and more. Users are rewarded with TiV every time they log in to the App and TiV automatically generates T-Beans. Investors are actively encouraged to use the App to increase their earning potential and interest percentage.

The table below demonstrates the options available for staking (returns illustrated are for active Tweebaa App users. Non active App users will receive 60% of these returns):

Deposit	Interest received at the end of one year
100 TWEE	100 TweeB
100 TweeB	A choice of 100 TweeB or 100 T-Beans
100 T-Beans	100 TWEE

The following examples are based on a 1-year staking option made by active Tweebaa App users, to receive a 100% annual return rate:

STAKE: TweeBuck (TweeB)

1. Stake TweeB to receive the return of TweeB.

Example: A stake of 100 TweeB at the beginning of the year, will receive a return of an additional 100 TweeB at the end of the year. Therefore your total asset at the end of the year will be 200 TweeB.

2. Stake TweeB to receive the return of T-Bean as the same value of TweeB market price while staking

This example demonstrates TweeBank's Dual Benefit "Maintain fiat money value AND enjoy the potential growth rewards of TweeB"

Example: A stake of 100 TweeB at the beginning of the year when the market price is US\$228 is a total investment of US\$22800. This stake will automatically receive 228000 T-Bean returns at the end of the year, meaning the initial investment is protected. Therefore the total asset at the end of the year (including the principal and the return) is 100 TweeB + 228000 T-Bean (1 T-Bean is US\$0.10) = 100 TweeB + US\$22800.

Comparison example:

A scenario: You have US\$22800 in your bank, after one year your total asset in the bank is **US\$22800 + bank interest.**

B scenario: You take US\$22800 from bank and buy 100 TweeB at US\$228 in the exchange, then you stake TweeB in TweeBank when TweeB market price is US\$228, at the year-end your asset is 228000 T-Bean **(US\$22800) +100 TweeB.**

C scenario: You take US\$22800 from bank and buy 100 TweeB at US\$228 in the exchange. You decide to hold the TweeB and wait for its value to increase. The Tweebaa App is a valuable asset to strengthen Tweebaa crypto's high-growth potential and so you have high expectations. Let's suppose that TweeB increases to US\$1000 and there is still high expectations on further growth. If you take advantage of the Dual Benefit solution and stake your TweeB in TweeBank and choose T-Bean rewards, after one year your return will be US\$1000 per TweeB (100 TweeB X 10 T-Bean per US\$ = 1 million T-Bean - US\$100,000), your total asset including the principal is 1 million T-Bean **(US\$100,000) + 100 TweeB.**

To summarize the above options:

- **B Scenario** is the perfect example of TweeBank exclusive Dual Benefits for everybody--Maintain your fiat money value of US\$22800 WHILST enjoying the potential growth of your 100 TweeB.
- **C Scenario** could enable you to receive higher financial rewards. By playing the market initially and then staking in the Dual Benefits scheme. Increasing your fiat money value from US\$22800 to US\$100,000 WHILST enjoying the highest growth potential of 100 TweeB as extra earnings
- **A Scenario** is how things are normally done when investing in crypto currency. Individuals invest at their own risk and can experience a rise and fall in their investments. The TweeBank exclusive Dual Benefit system removes the risk factor by securing the initial stake.

The conclusion:

By investing in TweeB and then staking TweeB in TweeBank you can have **peace of mind as your principal values have been 100% secured**. Then enjoy watching the anticipated growth potential materialize and your investment grow.

STAKE: T-Bean

1. Stake T-Bean to receive the return of T Bean

Example: If you Stake 10000 T-Bean at the beginning of the year, will receive the return of an additional 10000 T-Bean at the end of the year, giving you a total asset of 20000 T-Bean.

2. Stake T-Bean to receive the return of TWEE (TWEE amount is calculated at the same value of T-Bean, using the market price of TWEE when staking T-Bean)

Example: Stake 10000 T-Bean at the beginning of the year, will receive the return of your original T-Bean stake plus TWEE at the end of the year. Using the market price of TWEE when staking 10000 T-Bean to calculate, ie. If it is US\$45.50, the principal is 1000 T Bean * US\$0.1/T-Bean = US\$1000, the return of TWEE is US\$ 1000 / US\$45.5 = 22 TWEE. At the end of the year, the total asset including the principal and return is 10000 T-Bean + 22 TWEE.

Comparison example:

A scenario: You have US\$1000 in your bank, after one year your total asset in the bank is US\$1000 + bank interest.

B scenario: You take US\$1000 from your bank and buy 10000 T-Bean in the exchange, then you stake 10000 T-Bean in TweeBank. At the year end your asset is 10000 T-Bean (US\$1000) +22 TWEE.

To summarize the above options:

- **B scenario** is the perfect example of TweeBank exclusive Dual Benefits for everybody. Maintain your fiat money value of US\$1000 WHILST enjoying the potential growth of your 22 TWEE.
- **A scenario** does not enable you to get the best benefit from your money due to low bank interest rates.

The conclusion:

Tweebank provides the opportunity to use your money to invest whilst having **peace of mind as your principal values have been 100% secured**. Then enjoy watching the anticipated growth potential materialize and your investment grow.

STAKE: TWEE

1. Stake TWEE to receive the return of TweeB

Example: If you stake 100 TWEE at the beginning of the year, you will receive 100 TweeB at the end of the year, making your total asset = 100 TWEE + 100 TweeB. If the TWEE market price is US\$45.50 and the TweeB market price is USD228, (5 times of TWEE market price) the return of 100 TWEE staking is 500 TWEE, and therefore the total asset at the end of the year is the principal plus 600 TWEE.

It's 2021 and the crypto currency market is ever-changing. An increasing number of people are recognizing that it is the future. Elon Musk's recent investment of 1.5 billion dollars and announcement that Tesla will now accept Bitcoin as payment, has reinforced the belief that crypto currency is the way forward. In addition, the fact that Paypal has integrated Bitcoin into their payment system and traditional banks are also moving towards accepting Bitcoins only strengthens that belief. Tweebaa cryptos, TWEE and TweeB, are not just for trading purposes, they also have a strong utility usage that underpins them, they have substance. The future is bright for the Tweebaa Ecosystem!

This incentive plan is a limited offer, both in time and quantity, and is only available until March 30th 2021. The limited quota on the stake quantity is as follows,

Limited quota for TWEE staking:

30 days—25000 TWEE

90 days---25000 TWEE

180 days---50000 TWEE

365 days---50000 TWEE

Limited quota for TweeB staking:

30 days—1000 TweeB

90 days---1000 TweeB

180 days---2500 TweeB

365 days--2500 TweeB
